

# The benefits of integrated learning

Teachers teach Maths integrated with IT to students

Integrated studies bring together diverse disciplines in a comprehensive manner. In an integrated curriculum, students show higher signs of retention. At DPSG, Palam Vihar, students have been enjoying the merits of integrated learning. Teachers teach comprehension strategies in English, Social Science, Science and even Mathematics to help students excel. Even the holiday homework given to students is based on integration of concepts.

The topic 'Water' had been taken up and the DPSGites composed poems and articles on water conservation in English and Hindi, worked on sources of water for Social science, made projects on water purification in Science and prepared statistical data on water fit for human consumption in Mathematics. This helped students to connect better to information. An exhibition in the primary wing, Frozen Tales, also adhered to this concept and the students connected to the tales of yore thereby meeting the desired objectives.
